GPL-37 CONDENSED SOLUTION

NATURAL ORGANIC
CHAIN REACTION
STIMULANT

NATURAL VEGETABLE EXTRACTS

**GROWING
INTERNATIONAL
GROUP**

WHAT IS IT?

As of today, **GPL-37 Chain Reaction Agent** is the global first unique complex organic fertilizer. Its main effects are to activate the inter-chain reaction of the chief contents of the product creating the effects needed. Even the nutrition absorbed from through the leaf surface and root may take part in the chain reaction by means of GPL-37.

The chain reaction process ranges from **INFILTRATION, CONVERSION, CIRCULATION, TRANSFER, PRODUCTION, CREATION, REPLACEMENT, STIMULATION, MULTIPLICATION, CATALYSIS and RESTORATION** in combined effects.

GPL-37 is made from **NATURAL VEGETABLE EXTRACTS** and its composition as follows:

MAJOR MATERIAL:

G.P.L.-37 Chain Reaction Agent (Natural Vegetable Extracts) 75% (Dry basis)

COMPOSITION:

Organic Matter, 21.3%, N (2.7%); P (3ppm), K (14ppm), MgO (13ppm), Ca (290ppm), Fe (5ppm), Cu (0.4ppm), Mn (17ppm), Zn (20ppm) and the thousands of polyamine and hormone-like (NOT hormone) of which extracting from natural vegetable, the each contents below 10^{-8} to 10^{-10} , these ingredients has so many biological activities so that reach many kinds of efficacy on various stage of growth of plant.

**NATURAL
FERTILIZERS**

**GPL-37
CONDENSED
SOLUTION**

Champion fertilizer
One stop solution across the crop growth!

FEATURES:

1. The decoder for plants to grow robustly i.e. GPL-37 Chain Reaction Agent. UNBEATABLE VALUE AND INNOVATION.
2. A single nutrient dosage with the efficacy of multiplier efficacy. Costs saving, the unit cost of dosage only for lower than US\$3.00/ per Ha./each time, and yield increase for 20% to 200%.
3. The chain reaction GPL-37 organic growth regulator is the Commander-in-chief in plant nutrition circles. GPL-37, is a guider of which all nutrient factors and fertilizers (included farmers used various fertilizers such as NPK, Urea), it is able to lead and support the all nutrients to join the process of chain reaction, to enrich your Plant Growth Promoters.
4. The innovative technology of GPL-37 Chain Reaction Stimulant Fertilizer is able to regulate plant specific genes, develop plant growth regulation, growth stimulation, and high-efficiency fertilizers, which can increase crop yield, quality and added value. To regulate the specific genes that affect the production value factors such as the yield or flavor of the plant, it is a good competitive niche to grow high-altitude tea at a low altitude or to develop highpriced flavored coffee, and even extend the harvest period or earlier harvest period.

SOLUTION

Champion fertilizer
One stop solution across the crop growth!

FUNCTION:

1. Flexibility:

Effects of this chain reaction agent are focused on various stage of growth of a plant by transferring the nutrients accordingly into the plant in flexibly. To promote the rapid growth of plant and balanced growth with multiple reactions as a result of the aid and activation of GPL-37 chain reactions.

2. Systematization:

Because this agent is capable of providing a series of special effects on any part of the crops with chain reactions and flexibility - **which can promote germination, flowering, flower handle straight, prevent fruit drop, fruit hypertrophy, fruiting rate, to better coloring and greatly improve yield and quality, etc.** It can also to stunt the fresh shoot overgrowth of vine and jatropa, pistachio, macadamia, etc. and could increase branches emerge from earlier node, always do not need to prune and save the labor wage. Frequently application of the chain reaction agent is to be rewarded with the magic results. It is a condensed solution, which can mature earlier and increase the harvest, also increase water holding capacity. In addition, it helps reduce use of other compound fertilizers for 50% up.

3. Rapid Absorption, Conspicuously Effective, Perfect Absorption:

The GPL-37, it uses a small dosage, about dilute 4,000 parts to 6,000 parts that is 17ml to 25ml in 100 liters water, and dosage about 100ml to 120ml / per ha. / each time. **Yields increase for 20% to 200%.** It is a real cost-effective and outstanding crop nutrient / stimulator.

**STRONGLY RECOMMEND
OUR HOTTEST PRODUCTS**

WHY IS $1+1 \neq 2$? DO YOU BELIEVE IT?

The most instances for almost various fertilizers, they have 3% to 15% increases in nutrient uptake in the plants on its own. However when combined with our Chain Reaction **GPL-37 Agent**, it was 39% to 52% uptake which was amazing.

PROOF OF THE PUDDING IS THAT YOU ATE IT (EVIDENCE IS BETTER THAN THEORY)

Your actual testing and experiment will be most important and will have sufficient proof to verify its efficacy and benefits.
