

= **GPL-37 Chain Reaction Fertilizer** is similar VIAGRA (Hydroponics system) =

NOTE: The Brand name in U.K. is Enhance Organic Stimulant

The following message to share with you, it was a miracle experience on **GPL-37 Chain Reaction Fertilizer** from my client in U.K.:

=====

dear jin sheng when the lights are turn off , the plants go to sleep and the leafs of the plants drop down, this is ok , but when we put **Enhance Organic Stimulant** into the system (hydroponics), the plant leafs stay constant erect up, when lights on and off ? why is this? also the first time we put **Enhance Organic Stimulant** into system (hydroponics), the plants eat a lot of feed and water, but the 2 time it was add **Enhance Organic Stimulant** to tank there just eat feed and water as normal, some one ask me **if there is viagra in Enhance Organic Stimulant?** i think they was have a joke with me.

=====

This reflex and appearance, which is the results of chain reaction agent, and it is during the stage of mobility efficacy:

Mobility:

Effects of this agent are focused on various stage of growth of a plant by **transferring** the elements accordingly into the plant in mobility. To promote the rapid growth of plant with multiple reactions as a result of the aid and activation of GPL-37 chain reactions.

The chain reaction process ranges from INFILTRATION, **TRANSFER**, CIRCULATION, CONVERSION, PRODUCTION, CREATION, REPLACEMENT, STIMULATION, MULTIPLICATION, CATALYSIS and RESTORATION in combined effects.

Because the chain reaction process so that **GPL-37 Chain Reaction Fertilizer** can get the unique results and effects as below:

For Earlier Reaping: Use **GPL-37 Chain Reaction Fertilizer** continuously without interruptions **before and after the bud's differentiation for each once or twice spraying.** This may make the reaping earlier (Ripening Anticipation) than any other ones without using **GPL-37 Chain Reaction Fertilizer**. Example: Stop **GPL-37 Chain Reaction Fertilizer** one month prior to reaping for the pears; Use **GPL-37 Chain Reaction Fertilizer** continuously on oranges and tangerines until the term of one month before harvest to get desired results.

For Delay Ripening of fruits or Reaping Stage Extension: Use **GPL-37 Chain Reaction Fertilizer** on ripening fruit trees continuously once or twice more for delay ripening of fruits. The beans and vegetables may increase the reaping by approximately 30% in quantity and 5 to 7 times in frequency.

Due to the multifunction and miracle effects of **GPL-37 Chain Reaction Fertilizer**, our fertilizers, it is often considered the products as ATONIC, GA, 6-BA, IAA, CPPU, Alfa-NAA, Tomatotone, Rootone, B-9, ...as PGR.
